

RaceData network topography

Notes:

- Watches do not have to be tethered to phones to display data. Apple Watch may use Expedition RD3 TCP data directly
- iPhone or iPad will receive Expedition UDP or NMEA0183
- Android devices (phone, tablet, watch) will receive UDP or NMEA0183
- Manufacturer specific NMEA0183 WiFi Bridge devices may serve data directly over own WiFi, or network to the Main router.
- There is no practical limit to the number of devices listening to UDP or TCP.
- The range and quality of the WiFi signal is dependent on network AP settings, system router and antennas
- Bluetooth or ANT+ devices are not compatible.
